

Non-Destructive Testing.
EDDY CURRENT METHOD.

*Some theoretical aspects and
relative analytical developments.*

INDEX.

Preface.

i .

Part I.

Cylindric geometry

1 - Eddy current in a thin conductive cylindric layer.	
1.1 - Introduction	
1.2 - Thin cylindric conductive layer	3
1.3 - Influence of the diameter of a thin cylindric layer	9
1.4 - Similitude principle.	11
2 - Eddy current in a full section conductive cylinder.	
2.1 - Introduction	13
2.2 - Analytical model	
2.2.1 - .text... 2.2.2 .text...	14
2.2.3 - Introduction of the characteristic frequency f_0	17
2.2.4 - Using polar components	19
2.2.5 - Influence of the diameter in a full section cylinder conductor	20
2.2.6 - Magn. field $H(r)$ and eddy current density $J(r)$ in function of depth in a cyl. conductor	22
2.3 - Fictitious model and effective permeability	24
2.3.1 - text 2.3.2 ..text	
2.3.3 - Influence of diameter variations	26
2.4 - Similitude principle for the full section cylindric conductor	28
2.5 - Impedance graph for ferro-magnetic materials	29

Part II.

CYLINDRIC GEOMETRY.

3 - Coil encircling a tube	32
3.1 - Conductive tube model	32
3.2 - Analytical procedure.	33
3.2.1 - text	33
3.2.2 - Formal simplifications	36
3.3 - Total magnetic flux calculation.	37
3.4 - Magnetic fluxes in the A, B and C zones of the conductive tube	38
4 - Normalized signal at the coil	39
5 - Impedance graphs for tubes.	40
5.1 - Graph with T as a parameter	41
5.2 - Graph with the ratio f/f_0 as a parameter	43
6 - Influence of outer tube diameter variations for a given coil	44
7 - Coil within a hole.	45

Part III.

PLANE GEOMETRY.

EDDY CURRENT INDUCED BY AN EXTERNAL INDUCTOR.

8 - Introduction	49
9 - Analytical approach .	50
9.1 - Electromagnetic field of eddy current expressed by <i>Maxwell's</i> equations	
9.2 - Equation of the plane electromagnetic wave	52
10 - Digression on the mathematical solutions for the plane wave	55
11 - Eddy current parameters for a plane wave	55
12 - Current density $J(r)$.	56
13 - Impedance graph for a probe type inductor.	59
13.1 - Non ferro-magnetic materials.	59
13.2 - Ferro-magnetic materials	60
13.3 - Lift-Off Curves	60
14 - Evaluation on the impedance plane.	62
15 - Thin conductor layers.	63
16 - Non conductive layer on conductive material	64
17 - Conductive layer on conductive material.	64
18 - About the signal profile deriving from the surface scanning.	66
18.1 - Probes for surface scanning.	66
18.2 - Dynamic filter.	67
Appendix A.	69
About the <i>Bessel's</i> equation.	
1 - <i>Bessel's Equation</i>	69
2 - <i>Iterative formulas</i>	71
3 - <i>Equivalence among Bessel's functions</i>	72
4 - <i>Observations on the numerical calculus</i>	72
References for Appendix A.	73
Appendix B.	74
Representation of alternative isofrequential functions	74
Appendix C.	76
About the effective permeability μ_{eff}	76
Appendix D.	77
General bibliography.	77
Analytical Index.	78
